Deadline for manuscript submissions:

15 May 2019

Message from the Guest Editor

Dear Colleagues,

Sliding-mode control (SMC) is increasingly used in power electronics due to its accurate dynamic analysis, fast resulting response, and inherent robustness in front of parametric changes. Its applications in renewable energies range from the control of micro-inverters in solar systems to the regulation of bidirectional battery chargers in electric vehicles (EVs). It is also used in wind energy conversion systems (WECS), fuel-cell internal regulation, distributed maximum power point trackers in photovoltaic systems (PVS), and power supplies for efficient lighting.

The Special Issue will focus on new results and applications of sliding-mode control of power converters inserted in renewable energy systems (RES). Topics of interest for publication include, but are not limited to, SMC of/for:

- Micro-inverters for RES
- Power converters for constant power loads
- Bidirectional converters for EVs
- Modular nanogrids for RES
- Unity power factor rectifiers
- Differential power processing in PVS
- Power supplies for efficient lighting
- High performance motor drives for EVs
- Synchronous and induction generators for WECS
- Fuel cells for EVs

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex, Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15 days after submission; acceptance to publication is undertaken in 6.0 days (median values for papers published in the first six months of 2018).
